# ITP15

LED Bar Graph Display

The ITP15 Bar Graph Display is a compact process indicator that is intended to visualize an analog input signal in the range from 0 to 100% with 10 bars 10% each. The input signal can be either a linear voltage signal of 0(2)-10 V or current signal of 0(4)-20 mA.

Dut to cylindrical form of the mounting part of the enclosure, the device can be positioned either vertically or horizontally without changing the mounting cutout. The ITP15 fits into a standard cutout of Ø22.5 mm. The cutouts of the same diameter are commonly used for mounting standard signal lamps or push buttons at control cabinets or panels.

Besides indication, a simple on-off control can be implemented with the NPN transistor output of the ITP15. This output can control a load of up to 200 mA, 42 VDC.

Functions and features:

- Measuring and displaying the process value as bar graph
- Display range 0...100%
- 10 two-color bars (green/red) 10% each
