VISUALIZATION COMPONENT

APPLICATIONS

FUNCTIONS

Seven LEDs indicate the sensing level

The optimum sensing point can be confirmed at a glance as seven LEDs indicate the sensing level.

Suitable for flexible manufacturing

Since sensitivities of eight channels can be stored, product changeover is smooth and easy.

Select channel number by the "Channel shift key" on the operation panel or by using external channel select inputs. Further, since **GD-C2** is equipped with RS-232C communication function, the sensitivity values can be stored in a personal computer, etc., and fed into the controller as per requirement.

Two-sheet threshold level shift function

On

Two

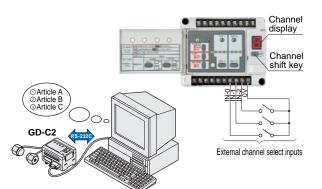

thre

Two

The two-sheet threshold level set by teaching can be shifted in nine steps to suit the detection conditions. This enables very stable detection.

	Two-sheet threshold _ level indication	,	
e-sheet level		(0%)	
o-sheet eshold level o-sheet level		1 (10%) 2 (20%) 3 (30%) 4 (40%) 5 (50%) 6 (60%) 7 (70%) 8 (80%) 9 (90%) (100%)	

In normal teaching, the two-sheet threshold level is set at 5 (50 %).

External initialization

Teaching is possible by external devices, such as, PLC, etc. This enhances productivity by machine automation.

FIBER SENSORS

LIGHT CURTAINS / SAFETY COMPONENTS

PRESSURE

FLOW SENSORS

INDUCTIVE PROXIMITY SENSORS

PARTICULAR USE SENSORS

SENSOR OPTIONS

SIMPLE WIRE-SAVING UNITS

PRECAUTIONS FOR PROPER USE

· Never use this product as a sensing device for personnel protection.

- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
- Make sure to use the sensor heads and controllers in the specified combinations. If they are used in any other combination, the sensor heads may get damaged.

Mounting

Placing of sensor heads

· Make the sender and receiver face each other and align their sensing center line.

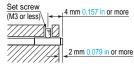

- Keep a distance from any magnet or a device generating magnetic field. It may degrade the detectability.
- · Surrounding metal influences the detectability. Please contact our office for more details.
- · If more than one set of sensor heads are closely mounted, detectability may be affected. Please contact our office for more details.

Mounting sensor heads

<GD-3>

Mounting with set screw

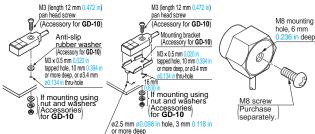

• Use a set screw (M3 or less), and the tightening torque should be 0.12 N·m or less.

<GD-10>

<GD-20>

Fixing at one point Fixing at two points

- The tightening torque should be 0.5 N·m or less.
- · To mount the sensor head with a nut, the thru-hole should be ø3.4 mm ø0.134 in.
- The mounting board must be 2.3 mm 0.091 in, or less, thick.

torque should be 11.2 N·m or less.

<On DIN rail>

- 1 With the stopper pressed in the direction of the arrow (it locks), fit the front portion of the mounting section of the amplifier on the 35 mm 1.378 in width DIN rail.
- ② Press and fit the rear portion of the mounting section on the 35 mm 1.378 in width DIN rail.
 - * To remove, insert a "minus" screwdriver into the stopper and pull out.

<On board with screws>

· Use two M4 pan head screws 10 mm 0.394 in, or more, long. The tightening torque should be 1.2 N·m or less.

Sensing mode

. The GD series has two sensing modes, one is the normal sensing mode and the other is the precise sensing mode. They are automatically selected by the characteristics of the object.

Normal sensing mode: The GD series goes into this mode when the

number of objects (e.g., large metal sheets) is distinguished with relative ease.

Precise sensing mode: The GD series goes into this mode when the number of objects (e.g., lead frames) is difficult to distinguish. In this mode, the sensitivity difference is so minute between two sensing levels that vibration and temperature changes must be carefully managed.

• The sensing mode indicator lights up green during the normal sensing mode, but lights up yellow during the precise sensing mode.

PRECAUTIONS FOR PROPER USE

Sensitivity setting

Teaching by external input

· The teaching can also be performed by external input signals.

Time chart

RUN / SET select input	RUN SET	High Low
SET-1 input	← 50 ms or more	High Low
Answer-back output (ANS. OUT)	1 ms or less	High Low
SET-2 input	→ 50 ms or more 50 ms or more	High Low
Answer-back output (ANS. OUT)	1 ms or less → freaching not successful → 1 ms or less → ing time (a few seconds) Teaching successful	High Low

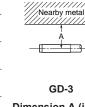

Distance from nearby metals

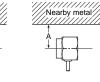

· As metals near the sensor head may affect the sensing performance, pay attention to the following points.

Influence of nearby metal

 The sensor head must be separated from nearby metal by a minimum distance as specified in the table below.

Nearb

GD-20

L

GD-20

Metal

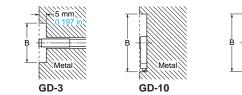

Dimension A (in case of iron)

Setting distance Model No.	5 mm 0.197 in	10 mm 0.394 in	30 mm 1.181 in	70 mm 2.756 in
GD-3	15 mm 0.591 in	20 mm 0.787 in		
GD-10	1	·		
GD-20				

GD-10

Embedding in metal

 The sensing performance may be affected if the sensor is completely embedded in a metal. Keep a minimum clearance between the sensor head and the metal as specified in the table below.

Dimension B (in case of iron)

Setting distance Model No.	5 mm 0.197 in	10 mm 0.394 in	30 mm 1.181 in	70 mm 2.756 in
GD-3	ø15 mm ø0.591 in	ø20 mm ø0.787 in		
GD-10	ø100 mm ø3.937 in			
GD-20				

Refer to p.1501 for general precautions.

Interference prevention

· When two or more sensor heads are mounted in parallel, keep a minimum separation distance as specified below to avoid interference.

	Sender		Receiver			
Dimension C			Sender			
Setting distance Model No.		10 mm 0.394 in	20 (35) mm 0.787 (1.378) in	30 (70) mm 1.181 (2.756) in		
GD-3	60 mm 2.362 in	80 mm 3.150 in				
GD-10	160 mm 6.299 in			220 mm 8.661 in		
GD-20	370 mm 14.567 in			630 mm 24.803 in		
Note: The value in the brackets is for GD-20.						

In case the respective senders and receivers are placed adjacently

	Sender					
Dimension D	D Sender					
Setting distance Model No. (Note)		10 mm 0.394 in	20 (35) mm 0.787 (1.378) in			
GD-3	30 mm 1.181 in	50 mm 1.969 in				
GD-10	2	250 mm 9.843 in				
GD-20	450 mm 17.717 in			700 mm 27.559 in		
Note: The value in the brackets is for GD-20						

Note: The value in the brackets is for GD-20.

RS-232C DATA TRANSMISSION (GD-C2 only)

· GD-C2 can feed in the set level data into a PC or PLC memory using RS-232C serial communication and retrieve it whenever required. In this case, the taught data should be stored in the prescribed channel.

Transmission specifications

- Baud rate: Selectable from 300, 600, 1,200, 2,400, 4,800, 9,600, 19,200, or 31,250 bits/sec.
- Format: Data bits ... 7 bits or 8 bits Parity check None or Enable, Even or Odd Stop bits 1 bit or 2 bits Terminal code CR or ETX

Self-diagnosis (Alarm) function

• The **GD** series constantly runs self-diagnosis, outputs the result with self-diagnosis output, and lights the selfdiagnosis indicator. In addition, error content is shown on the channel display using error codes.

Others

- · Do not operate the sensor for a few seconds immediately after supplying power because of transient conditions including self-diagnosis time.
- · Make sure to check the ability of the sensor to detect the number of sheets of your actual objects before use. If real objects differ from teaching samples in size or in characteristics, or the detecting condition deviates, an error may occur. Please note that magnetic metals or metals with low magnetic permeability such as steel especially have a strong tendency.
- In situations when magnets are in close proximity such as during electromagnet conveyance, this causes malfunctions due to electromagnetic disorder.
- · When conducting minute detections, favorable sensing conditions are obtained only after having elapsed 60 min. after the initial introduction of the power supply.

Metal-sheet Double-feed Detector **GD SERIES**
