TECHNOLOGY

The **inductive** sensors, our abbreviation **IAS**, contain a transistor oscillator whose power consumption is influenced by the approach of metals and other electrically conductive materials. This effect can also be achieved through a non-conductive material. Depending on the type, the current change of the oscillator will be amplified to a streamlined output signal or output as a binary signal by a switching amplifier.

Output stages with **npn or pnp transistors** are available for **DC** operation.
A **transistor output** stage or FET-output is integrated for **AC** connection

The output switching functions are

NO, NC or change-over (antivalent),
similar to mechanical switches.

Electronic circuits, PLCs, relays or contactors can be activated directly with inductive sensors. The current change in the oscillator is caused without contact by the approach of the actuating material to the active area. The damping of the oscillator is possible between the active surface and specified maximum sensing distance (S_n) $\pm 10\%$. No mechanical force is exerted on the actuating material in the process, and no magnetic effect is caused by the high-frequency alternating field.

The components of the IAS are mounted in plastic or metal casings and encapsulated with epoxy casting resin. The plastics used for the housings are:

- ⇒ PVC (polyvinylchloride)
- ⇒ PA (polyamide) 6.6 glass-fibre reinforced
- ⇒ PC (polycarbonate)
- ⇒ PTFE (polytetrafluor ethylene)
- ⇒ PEEK (polyetheretherketone)

And the metal housings are

- ⇒ brass / chrome or nickel-plated
- ⇒ VA stainless-steel, material No. 1.4301 or No. 1.4305.
- ⇒ Aluminium die-cast

By means of the following measures all devices are insensitive to dirt, vibration (vibration stability: 30 g, 100...2000 Hz, 1 hour) and are watertight (depending on the type, up to IP 68). The choice of housings enables a wide range of applications, e.g. with aggressive media, in hot areas or in areas subjected to steam.

Only pre-tested electronic components, proven integrated circuits and hybrid circuits are used and produced with SMT. The standard constant ambient temperature permitted is -25 up to +70°C, and up to 90°C for brief periods. High-temperature types for use from -200 up to +250°C are also included in our general product line.

With contactless detection no physical actuating force is required for operation. There is no contact bounce, no sensor wear, no maintenance and the service life is independent of the switching frequency.

IAS can be used in machines, systems and vehicles as limit switches, contactless position switches for monitoring and positioning, as pulse generators for counting tasks, distance and speed measurements, and for many other applications (for application examples see page 11).

TECHNOLOGY

Wiring of the inductive sensors should be routed separately or screened from heavy conductor lines, as in extreme cases inductive peak voltages can destroy the sensors despite the integrated protective circuit. Screened cable or twisted lines are recommended, especially for longer cable runs > 5 m. Direct control of electric light bulbs is to be avoided, because during the switch-on moment cold current is many times the rated current and can destroy the output stage of the sensor.

Units with strong local fields, e. g. high power walkie-talkies, or noise sources in the lower frequency range, e.g. long, middle or short wave transmitters should not be operated close to the sensors or additional measures have to be taken in order to eliminate their maloperation.

2- and 3-wire sensors with binary output can be used in series or parallel connection, similar to mechanical contacts. The type-typical voltage drop and the residual voltage U_d , which must be multiplied in accordance with the number of sensors for series connection, must be noted. In the case of parallel connection of sensors with thyristor output, the first switched output takes over the total load current.

Series connection

Parallel connection

2 wire AC/DC

3 wire DC NPN

3 wire DC PNP

ADJUSTMENT

Analog inductive sensors are equipped with a 20-turn spindle potentiometer. This allows adjustment of an application specific operating range between the minimum distance "0 mm" and the type-typical maximum value. Consequently, the full output current range (4...20 mA) is always present, regardless of the required measuring distance. The analog sensors of series 10 are designed with a 2-colour LED that facilitates adjustment. Outside the operating range $I_A < 4$ mA and $I_A > 20$ mA green light is emitted to display operational readiness. Within the operating range of 4...20 mA the LED is yellow. In the undamped state the output current value is > 20 mA and moves with the reduction of the object distance toward 4 mA (value at total damping approx. 2.5 mA).

The data of the **nominal sensing distance** are based on the measuring method according to DIN VDE 0660, Part 208. The respective nominal sensing distance is indicated with a tolerance of $\pm 10\%$. The standard measurement plate is square with a thickness of 1 mm and is made of carbon steel FE 360 (defined in ISO 630: 1980) with a smoothed surface and earthed. The side lengths are equal to the diameter of the active area of the IAS or equal to $3 \times S_n$, depending on which value is greater. With a different material or a smaller surface of the actuating element, the sensing distance is smaller.

The possible sensing distance on a particular metal can be worked out by means of the typical reduction factors: **Sensing distance = $S_n \times$ reduction factor**.

Metal type:	FE 360	St 37	CrNi	V 2A	V 4A	Ms	Al	Cu	Au
Reduction factor approx.	1	1	0.85	0.75	0.7	0.45	0.4	0.3	0.24

TYPICAL CURVES

MOUNTING

There are two different types of inductive sensors:

1. **For flush mounting** in metal and other materials. These sensors can also be mounted close together (see Fig. 1 and 3).
2. **For non-flush mounting** in metal. However, these types can also be mounted flush in nonmetals. When mounting two or more sensors side by side a space / free zone must be provided (see Fig. 2 and 4).

Mounting

Fig.1

Fig.2

The dimension „e“ corresponds to the thread-free area of standard sensor types (-A21-...). Otherwise „e“ is 7 mm.

Fig.3

Fig.4

MOUNTING

The material and version-dependent **maximum torque** should be taken into consideration in order to prevent damage to the threaded sleeves when mounting.

The values listed in the table are based on the use of the nuts supplied with the sensors.

Thread	Housing Material				
	PVC	PA 6.6	PTFE	Brass	Stainless Steel
M 5 x 0.5	-	-	-	-	1.5 Nm
M 8 x 1	-	-	-	-	4.5 Nm
M 12 x 1	1.5 Nm	1 Nm	0.2 Nm	16 Nm	25 Nm
M 18 x 1	-	1.7 Nm	0.5 Nm	28 Nm	60 Nm
M 22 x 1.5	12 Nm	6 Nm	1.4 Nm	32 Nm	84 Nm
M 30 x 1.5	-	8 Nm	2.5 Nm	82 Nm	200 Nm
M 32 x 1.5	-	13 Nm	3 Nm	150 Nm	230 Nm

Due to the permitted thread tolerances specified in German standard DIN 13, the **maximum screw-in length** for threaded sensors should be taken into consideration. Depending on that the length of the threaded block for screwing in proximity sensors should not exceed the following dimensions. In the case of larger threaded blocks we recommend drilling a blind hole in order to adhere to the maximum screw-in length.

Thread:	M 5 x 0.5	M 8 x 1	M 12 x 1	M 18 x 1	M 22 x 1.5	M 30 x 1.5	M 32 x 1.5
Screw-in length max.	3 mm	6 mm	8 mm	12 mm	12 mm	12 mm	12 mm

TECHNICAL TERMS

Unless otherwise specified technical data is as follows: +24°C, $U_B = 8 \text{ V DC}$ for IAS-30; $U_B = 24 \text{ V DC}$ for IAS-10 and IAS-20 and $U_B = 230 \text{ V AC}$ for IAS-60.

Operating sensing distance / S_a

Within the operating sensing distance the sensor operates reliably taking in to account all the possible tolerances. It lies between 0 and $0.81 \times S_n$.

Power up time delay

The time the sensor needs to be ready for operation after connecting the operating voltage. It is in the milliseconds range.

TECHNICAL TERMS

Housing materials

The application of the housing materials used is based on the technical specifications of the material and of the manufacturer. Even though RECHNER Sensors have far-reaching application experience concerning the use of different housing materials, the customer is responsible for checking in each case that the housing material is suitable for the application.

Cable

For the standard models PVC- or PUR-cable are used. One has to take into consideration that the cable should not be moved with ambient temperatures below -5°C . PVC is not suitable for use in applications with oil-based liquids or with UV-radiation. PUR is not suitable for continuous contact with water. For special application areas silicone or PTFE cables are available.

Nominal sensing distance / S_n

The characteristic value of a proximity sensor, without consideration of production tolerances and variations due to temperature and voltages.

Real sensing distance / S_r

The sensing distance determined at $+20^{\circ}\text{C}$ and rated voltage. Here the series variance is taken into consideration. Variation max. $\pm 10\%$.

Reduction factors

The reduction factors, as shown in the table on page 6, should be taken into consideration, for metals other than FE 360 or ST 37.

Series- and parallel connection

It is possible to connect the proximity sensors in series or parallel. When considering this it must be taken into account that the voltage drops are added for series connection and the residual voltages for parallel connection. Under these circumstances it is advisable to operate a maximum of three sensors in a corresponding circuit.

Repeat accuracy of the switching point

The variation of the switching point of two successive measurements at constant ambient conditions.

Frequency of operating cycles

The maximum damping and un-damping cycles of the proximity sensor within one second. To ascertain the frequency of operating cycles a pulse / break ratio of 1 : 2 is used as a basis, at $S_n \frac{1}{2}$.

Switching hysteresis

The difference between the switch-on and switch-off point of a proximity sensor, when approaching or moving away from the standard measuring plate. It is $< 20\%$ of the real sensing distance.

Enclosure rating

IP 65: Protection against contact with voltage-carrying parts, protection against ingress of dust and water jet.

IP 67: Protection against contact with voltage-carrying parts, protection against ingress of dust and protection against ingress of water when the equipment is immersed in water, up to 1 m depths and for a period of 30 minutes.

Temperature variation

The displacement of the switching point if the ambient temperature changes.

APPLICATION EXAMPLES

Fig. 1: Inductive level control within a plastic container at a by-pass, by means of a metal float

Fig. 2: Position aid for transported tins

Fig. 3: Detection of a gear wheel or cam wheel

Fig. 4: Counting of metal containers

All specifications are subject to change without notice. (05/2004)

Fig. 5: Position aid for the gripper of industrial robots

SERIES

The series 10 contains inductive 3-wire proximity sensors with digital output **pnp** with NO or NC-function. Electronic circuits, PLC's, relays and our power supplies of series 130 can be directly activated. Analog sensors with 4...20 mA output are also available. The operating range of these analog sensors is adjustable by means of a potentiometer and they can be actuated by analog interfaces with internal resistance $R_i \leq 300$ ohm. The sensors are reverse polarity protected, overload protected and have electronic short-circuit protection.

StEx-Sensors for use in Zone 20 with ATEX-certificate complete this series.

The series 20 contains inductive 3-wire proximity sensors with digital output **npn** with NO or NC-function. Electronic circuits, PLC's, relays and our power supplies of series 130 can be directly activated. The sensors are reverse-polarity protected, overload-protected and have electronic short-circuit protection. StEx-Sensors for use in Zone 20 with ATEX-certificate complete this series.

The series 30 contains inductive 2-wire proximity signal generators according to **NAMUR DIN 60947-5-6**. These sensors can be mounted in explosion hazardous areas when they are connected to approved isolating switching amplifiers with intrinsically safe control circuits. [EExia] or [EExib], our series N-131... Depending on which isolating switching amplifier is used the NAMUR-sensors of this series can be used up to zone 1. The data specified in the certificate of conformity of the isolating switching amplifier used must be taken into consideration.

StEx-Sensors for use in Zone 20 with ATEX-certificate complete this series.

The series 60 contains inductive 2-wire AC/DC proximity sensors with digital output with NO and NC function. AC/DC relays, conductors, solenoid valves can be activated directly. PLCs with AC inputs can also be connected if the minimum load current is taken into consideration. The sensors have a protective circuit against high induction voltages.

For increased requirements for the permitted ambient temperature range of our inductive proximity sensors, we offer the series up to +100°C with integrated electronic as a 3-Wire DC version. The sensors are available with housings made of PTFE, PTFE/VA or PTFE/brass and have a silicone connection cable. For extreme ambient or product-temperature conditions, our high temperature sensors up to +250°C are available with external electronics. The sensors are integrated in PEEK, PTFE, PEEK/VA or PTFE/VA housings. For the rectangular sensors housings in PEEK/aluminium are used. The FEP-coated sensor cable with VA grid screening, in the lengths 2, 5 or 10 m, is the connection to the evaluation unit and may also be used under high-temperature conditions. The evaluation unit is connected to the sensor by means of a plug-in connector. On the sensor side the cable is permanently cast in or equipped with a temperature-resistant plug-in connector (...Y-version). The sensing distance for high temperature sensors can be adjusted on the evaluation unit and the switching state is displayed by an LED. The sensing distance adjustment should be made at operating temperature. Here the maximum specified sensing distance and the temperature drift must be taken into consideration.

**Inductive High-Temperature Sensors
Series - 250**

Housing M12 x 1 with sealing screw

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK
- For an ambient temperature of max. 250 °C

Certificate:

Technical data

Operating distance Sn [mm]	4
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M12
Art.-No.	IA 0117
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 68
Connection cable for connection to inductive evaluation units ISA-... with plug-in connector	2 m PTFE with VA screen grid lead
Housing material	PEEK
Active surface	PEEK

All specifications are subject to change without notice. (05/2004)

Inductive High-Temperature Sensors Series - 250

Housing M18 x 1 with sealing screw

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK
- For an ambient temperature of max. 250 °C

CE

Certificate:

Technical data

Operating distance Sn [mm]	8
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M18
Art.-No.	IA 0118
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 68
Connection cable for connection to inductive evaluation units ISA-... with plug-in connector	2 m PTFE with VA screen grid lead
Housing material	PEEK
Active surface	PEEK

Available also with 5 m connection cable: Art.-No. IA 0127

All specifications are subject to change without notice. (05/2004)

**Inductive High-Temperature Sensors
Series - 250**

Housing M22 x 1.5

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK/Brass
- For an ambient temperature of max. 250 °C

Certificate:

Technical data

Operating distance Sn [mm]	12
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M22-Y
Art.-No.	IA 0119
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK/Brass
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314

All specifications are subject to change without notice. (05/2004)

Inductive High-Temperature Sensors Series - 250

Housing M30 x 1.5

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK/Brass
- For an ambient temperature of max. 250 °C

CE

Certificate:

Technical data

Operating distance Sn [mm]	15
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M30-Y
Art.-No.	IA 0120
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK/Brass
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314
- 20 m PTFE-cable with VA screen grid lead and connectors Art. No. 193315

All specifications are subject to change without notice. (05/2004)

Inductive High-Temperature Sensors Series - 250

Housing M32 x 1.5

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK
- For an ambient temperature of max. 250 °C

Certificate:

Technical data

Operating distance Sn [mm]	20
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M32-Y
Art.-No.	IA 0122
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314
- 20 m PTFE-cable with VA screen grid lead and connectors Art. No. 193315

Inductive High-Temperature Sensors Series - 250

Housing M32 x 1.5

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK/VA
- For an ambient temperature of max. 250 °C

CE

Certificate:

Technical data

Operating distance Sn [mm]	20
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-M32-PEEK/VA-Y
Art.-No.	IA 0124
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK/VA No. 1.4305
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314
- 20 m PTFE-cable with VA screen grid lead and connectors Art. No. 193315

All specifications are subject to change without notice. (05/2004)

**Inductive High-Temperature Sensors
Series - 250**

Housing 40 x 40 x 56 mm

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK/AL
- For an ambient temperature of max. 250 °C

Certificate:

Technical data

Operating distance Sn [mm]	25
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-C25-Y
Art.-No.	IA 0115
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK/AL
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314
- 20 m PTFE-cable with VA screen grid lead and connectors Art. No. 193315

Inductive High-Temperature Sensors Series - 250

Housing 55 x 55 x 56 mm

- For connection to the evaluation unit ISA-...-Y5
- Housing material: PEEK/AL
- For an ambient temperature of max. 250 °C

CE

Certificate:

Technical data

Operating distance Sn [mm]	35
Sensing distance adjustable at the evaluation unit	-
Mounting: flush/ non-flush	non-flush
Type	IS-250-C35-Y
Art.-No.	IA 0121
Permitted ambient temperature	-70...+250°C
Enclosure rating IEC 529	IP 67
Connection for inductive evaluation units ISA-...	metal flange connector
Housing material	PEEK/AL
Active surface	PEEK

Connection cable is not delivered with the probe (see page 86).

Order specifications:

- 2 m PTFE-cable with VA screen grid lead and connectors Art. No. 193312
- 5 m PTFE-cable with VA screen grid lead and connectors Art. No. 193313
- 10 m PTFE-cable with VA screen grid lead and connectors Art. No. 193314
- 20 m PTFE-cable with VA screen grid lead and connectors Art. No. 193315

All specifications are subject to change without notice. (05/2004)

Evaluation Unit For Inductive High-Temperature Sensors Series - 250 • PNP

Housing 98.5 x 64 x 34.5 mm

- For connection to inductive high-temperature sensors IS-250...
- Housing material: AL

Certificate:

- 20 m Art.-No. 193315

PROTECTION CAPS AND PROTECTION SETS

Example: Protection Caps M30/M32 PTFE

PROTECTION CAP

The PTFE protection cap (PEEK and Delrin are also available) is designed for applications where the detected material is highly abrasive, e.g. granules. It is a protection cap for the front cap of the sensor. In the case of damage due to abrasion one only has to change the protection cap and the sensor remains in good condition.

All specifications are subject to change without notice. (05/2004)

Example: Protection Set M32

Protection Set M18 Art.-No. 196305
Protection Set M30 Art.-No. 196302
Protection Set M32 Art.-No. 196301

PROTECTION SET

The PTFE protection set M32 x 1.5 consists of an internally threaded cover, a Pg9-screwing for cable entry and a rubber gasket between the cover and the sensor. This protection cover serves as improvement to the degree of protection, against infiltration of liquids, for example in applications where the sensor is totally immersed in liquids. The resistance of the material still needs to be checked.

The thread of the sensor has to be sealed, for example with PTFE sealing-tape. The protection cover has to be screwed totally up to the end, and then the Pg-screw has to be fixed.

NORMS

The products of Rechner Industrie-Elektronik GmbH are designed and checked in accordance with the standards and specifications, DIN - VDE - IEC, for electric and electronic instruments. For new and revised products the newest standards are always used.

Effective standards for proximity switches and sensors:

DIN VDE 0660 Part 208:

Low-voltage switchgear - additional requirements for inductive proximity switches.

DIN VDE 0660 Part 209

Low-voltage switchgear and contolgear, control switches - additional requirements for proximity switches used in safety-related applications.

DIN VDE 0660 Part 212 (Replaces DIN 19234)

Instrumentation and control technology - electrical position sensors - DC interface for position sensors and switching amplifiers

European Standards

EN 60947-5-2 Low Voltage Switchgear Part 5

Control circuit devices and switching elements, section 2: proximity switches

EN 60947-5-6

Control circuit devices and switching elements, proximity sensors - DC interface for proximity sensors and switching amplifiers (NAMUR)

International Standards

IEC 947-5-2 Low-voltage switchgear and controlgear Part 5

Control circuit devices and switching elements - Section 2, proximity switches

Draft IEC 61934

Control circuit devices and switching elements DC interface for proximity sensors and switching amplifiers (NAMUR)

Standards On Explosion Protection

DIN EN 50014

Electrical apparatus for potentially explosive environments.
General requirements.

DIN EN 50020

Electrical apparatus for potentially explosive environments.
Intrinsic safety „i“

EN 60079-10

Electrical apparatus for potentially explosive environments.
Classification of hazardous areas.

EN 60079-14

Electrical apparatus for potentially explosive environments.
Classification of hazardous areas (mines excepted).

NORMS

Norms for quality assurance (QS)

DIN ISO 9000-9004 (EN 29000-29 004)

Quality assurance (QA) for products and services

DIN ISO 9001

Quality assurance in design/development, production, installation and servicing

DIN ISO 9002

Quality assurance in production

DIN ISO 9003

Quality assurance for final testing only

DIN ISO 9004

Quality management and elements of a quality management system

RECHNER Industrie-Elektronik-GmbH is certified according to DIN ISO 9001:2000.

- Marking

The CE marking represents the manufacturer's confirmation that the identified product conforms to applicable standards and directives throughout Europe. The following regulations apply to the RECHNER products.

89/336/EWG

EMC Directive (EN 60 947-5-2)

73/23/EWG

Low-voltage Directive (compare with VDE 0160, product standard EN 60947-5-2)

Directive 94/9/EG

Equipment and Protection Systems designed for use in potentially explosive environments

RECHNER Industrie-Elektronik GmbH certifies the conformity of its products with each of the applicable directives in a Manufacturer's Declaration. In addition RECHNER has a laboratory accredited by DATech for testings according to IEC/EN 60947-5-2 and also an accredited EMC laboratory.

SPECIFICATION FOR EXPLOSION PROTECTION

	European Union	North America
Division of Hazards	Explosive mixtures in Group1: mines susceptible to fire damp Group2: areas other than mines	Explosive mixtures of air with CLASS I: Gases and vapours CLASS II: Dust CLASS III: Fibers
Ignition Hazards due to Sparks	Classification of the protection types intrinsic safety/flame-proof enclosure according to minimum ignition current/limit gap with reference to the minimum ignition energy of representative gases: Group I Methane Group IIA Propane Group IIB Ethylene Group IIC Hydrogen, Acetylene This classification also partially applies to the type of protection „n“ (zone 2 equipment)	Division of CLASS according to ignition energy: CLASS I Group A Acetylene B Hydrogen C Ethylene D Methane CLASS II Group E Metal dust F Coal dust G Grain dust CLASS III No grouping
Ignition Hazards due to Hot Surfaces	Classification into temperature according to IEC 79-8 for maximum surface temperatures at an ambient temperature of 40°C under failure conditions: T1 ≤ 450°C T2 ≤ 300°C T3 ≤ 200°C T4 ≤ 135 °C T5 ≤ 100°C T6 ≤ 85°C	
Division of Hazardous Areas	The following are classified according to the probability of the occurrence of an explosive atmosphere: For gases, fumes and vapours: (EN 60079-10) Zone 0 constant or long term 1 occasional 2 rare and short term for dusts: (EN 1127-1) Zone 20 constant or long term or frequent 21 occasional 22 short term or accumulation or layers of dust	for gases and dusts } Division 1 } Division 2
Safety data	For the ratings of combustible gases and vapours as a basis for classification according to ignition energy, ignition temperature and flash point, see: Redeker, Nabert, Schön/Safety Ratings of Combustible Gases and Vapours	NFPA 497 M CSA Nr. C22-1
Certification Authorities	PTB Physikalisch-Technische Bundesanstalt BVS Bergbauversuchsstrecke BASEEFA British Approvals Service for Electrical Equipment in Flammable Atmosphere and others	UL Underwriters Laboratories, USA FM Factory Mutual Research, USA CSA Canadian Standards Association
Installation Requirements	DIN EN 60079-14 (VDE 0165 Part 1) for explosive gas environments DIN EN 50281-1-2 (VDE 0165 Part 2) for environments with flammable dust	NFPA 70 National Electrical Code Art. 500 NFPA 493 Standard for Intrinsically safe operations ...
